https://github.com/OMC03

Computer Science student passionate about building immersive gameplay experiences. Skilled in Unity development, object-oriented programming, and designing engaging interactive systems. Excels at transforming creative concepts into polished, player-focused features through clean code, smart problem-solving, and strong teamwork.

SKILLS

- **Languages:** C#, C++, Python
- **Engines:** Unity (2D/3D)
- **Tools:** Git, Visual Studio
- **Engine Skills:** Adept at UX/UI Design, 2D character gameplay/animations, versed in diverse gameplay mechanics

---

PROJECTS

2D Platformer Game – Unity / C#

- Designed and programmed a 2D side-scrolling platformer with progressively challenging level design.
- Implemented player movement physics, collision handling, and checkpoint logic using Unity's physics engine.
- Created custom enemy AI behaviors and interactive collectibles to enhance player engagement.

Snowball Fight Game – Unity (Local Multiplayer) / C#

- Developed a local two-player arena game supporting shared-keyboard input.
- Built player controllers and projectile mechanics using event-driven C# scripts.
- Designed scoring and round-based gameplay loop with UI feedback and win conditions.

Gingerbread Clicker – Unity / C#

- Created a holiday-themed incremental clicker game inspired by *Cookie Clicker*.
- Implemented core loop logic, including currency generation, upgrades, and visual feedback.
- Utilized Unity UI Toolkit for responsive buttons, animations, and scaling across screen sizes.

HIGHLIGHTS

- Experienced in collaborative version control and agile development pipelines.
- Built optimized scripts across multiple projects, building and learning as I go
- Strong interest in systems programming, performance profiling, and engine-level scripting
- Strong desire to build collaborative games to enhance user experience and push toward the future of game design

---

EDUCATION

California State University, Long Beach
BS in Computer Science, Minor in Game Development
Graduating June 2027
